

Village Board Meeting

February 2025

Streets

- Vehicle and building maintenance still the focus.
- Continuing with budget work

Water

- The plant is running great.
- Getting some “well” time in.
- The “faulty meter report” repairs are still ongoing.
- Had a call about water coming out of someone’s backyard. Tested it and it was village water. I was in talks with the neighbor who called it in, and the owners of the house where it was possibly coming from, who were 2 hours away. Mark and I were able to get the shut off cleaned out and it turned off. We waited for 20 minutes with no visible slow down of water, so we turned it back on, so they had heat. The next day they came up and discovered their basement flooded and heard the water outside. I shut them off again and the sound stopped which confirmed my suspicion that it was their service line. I advised them to find a contractor to fix.

Sewer

- The plant is running great.
- We had our annual inspection with DEC. It went very well.
- Our first month with the new lab went well. Noticeable savings already.
